

## COMP4513 React 2 Lab Instructions

I have (at least) two separate React labs. The files and instructions are in the book's official labs (<https://funwebdev3rd.gumroad.com/l/lab-set-one>). The first lab is Lab 11b: Intermediate React, which is 27 pages with 14 exercises. While these step-by-step exercises (and the test-your-knowledges) aren't marked, I do think they will help you learn React in a more hands-on manner.

What I will be marking is Project 2 of Chapter 11 (which I've provided). You will notice that it says "Use your completed Test Your Knowledge #2 as the starting point for this project." While I have included the instructions for Test Your Knowledge #2, if you work your way through the lab, you will essentially be at a similar starting point (i.e., you don't need to also do Test Your Knowledge #2).

You can find the files and the relevant pages from the book at:

<https://github.com/mru-comp4513-archive/comp4513-w2023-react2>

You can download the starting files as a zip or use git to clone the repo.

I would recommend that you finish this lab by Oct13-15 (or even earlier), since it illustrates a lot of the techniques you will need for your assignment.
